# San Pablo Catholic University (UCSP) Undergraduate Program in Computer Science SILABO

# CS1D2. Discrete Structures II (Mandatory)

## 1. General information

1.1 School : Ciencia de la Computación 1.2 Course : CS1D2. Discrete Structures II

1.3 Semester :  $2^{do}$  Semestre.

1.4 Prerrequisites : CS1D1. Discrete Structures I.  $(1^{st} \text{ Sem})$ 

1.5 Type of course: Mandatory1.6 Learning modality: Face to face1.7 Horas: 2 HT; 4 HP;

1.8 Credits : 4

1.9 Plan : Plan Curricular 2016

#### 2. Professors

#### Lecturer

• Daniel Alexis Gutierrez Pachas <dgutierrezp@ucsp.edu.pe>

- PhD in en Ciencia de la Computación y Matemática Computacional , Universidad de Sao Paulo, Brasil, 2017.
- MSc in en Matemática, Universidad Federal De Juiz De Fora, Brasil, 2013.
- Luis Fernando Díaz Basurco <ldiaz@ucsp.edu.pe>
  - MSc in Matemática, Pontificia Universidad Católica del Perú, Perú, 1990.

#### 3. Course foundation

In order to understand the advanced computational techniques, the students must have a strong knowledge of the Various discrete structures, structures that will be implemented and used in the laboratory in the programming language..

#### 4. Summary

1. Digital Logic and Data Representation 2. Basics of Counting 3. Graphs and Trees

#### 5. Generales Goals

- That the student is able to model computer science problems using graphs and trees related to data structures.
- That the student applies efficient travel strategies to be able to search data in an optimal way.
- That the student uses the various counting techniques to solve computational problems.

#### 6. Contribution to Outcomes

This discipline contributes to the achievement of the following outcomes:

- 1) Analyze a complex computing problem and to apply principles of computing and other relevant disciplines to identify solutions. (Familiarity)
- 6) Apply computer science theory and software development fundamentals to produce computing-based solutions. (Familiarity)

#### 7. Content

UNIT 1: Digital Logic and Data Representation (10)		
Competences:		
Content	Generales Goals	
<ul> <li>Reticles: Types and properties.</li> <li>Boolean algebras.</li> <li>Boolean Functions and Expressions.</li> <li>Representation of Boolean Functions: Normal Disjunctive and Conjunctive Form.</li> <li>Logical gates.</li> <li>Circuit Minimization.</li> </ul> Readings: Rosen 2007. Grimaldi (2003)	<ul> <li>Explain the importance of Boolean algebra as a unification of set theory and propositional logic [Assessment].</li> <li>Explain the algebraic structures of reticulum and its types [Assessment].</li> <li>Explain the relationship between the reticulum and the ordinate set and the wise use to show that a set is a reticulum [Assessment].</li> <li>Explain the properties that satisfies a Boolean algebra [Assessment].</li> <li>Demonstrate if a terna formed by a set and two internal operations is or not Boolean algebra [Assessment].</li> <li>Find the canonical forms of a Boolean function [Assessment].</li> <li>Represent a Boolean function as a Boolean circuit using logic gates [Assessment].</li> <li>Minimize a Boolean function. [Assessment].</li> </ul>	
Readings: Rosen2007, Grimaldi (2003)		

<ul> <li>Counting arguments</li> <li>Set cardinality and counting</li> <li>Sum and product rule</li> <li>Inclusion-exclusion principle</li> <li>Arithmetic and geometric progressions</li> <li>The pigeonhole principle</li> <li>Permutations and combinations</li> <li>Basic definitions</li> <li>Pascal's identity</li> <li>The binomial theorem</li> <li>Solving recurrence relations</li> <li>An example of a simple recurrence relation, such as Fibonacci numbers</li> <li>Basic modular arithmetic</li> <li>Perform computations involving modular arithmetic</li> <li>Apply counting arguments, including sum and product rules, inclusion sund and arithmetic, inclusion such as fibusion-exclusion principle and arithmetic/geometric progressions [Familiarity]</li> <li>Apply the pigeonhole principle in the context of formal proof [Familiarity]</li> <li>Compute permutations and combinations of a se and interpret the meaning in the context of the particular application [Familiarity]</li> <li>Map real-world applications to appropriate counting formalisms, such as determining the number of way to arrange people around a table, subject to constraints on the seating arrangement, or the number of ways to determine certain hands in cards (eg, full house) [Familiarity]</li> <li>Solve a variety of basic recurrence relations [Familiarity]</li> <li>Analyze a problem to determine underlying recurrence relations [Familiarity]</li> </ul>	Competences:		
<ul> <li>Set cardinality and counting</li> <li>Sum and product rule</li> <li>Inclusion-exclusion principle</li> <li>Arithmetic and geometric progressions</li> <li>The pigeonhole principle</li> <li>Permutations and combinations</li> <li>Basic definitions</li> <li>Pascal's identity</li> <li>The binomial theorem</li> <li>Solving recurrence relations</li> <li>An example of a simple recurrence relation, such as Fibonacci numbers</li> <li>Other examples, showing a variety of solutions</li> <li>Basic modular arithmetic</li> <li>Apply the pigeonhole principle in the context of formal proof [Familiarity]</li> <li>Compute permutations and combinations of a se and interpret the meaning in the context of the paticular application [Familiarity]</li> <li>Map real-world applications to appropriate countir formalisms, such as determining the number of way to arrange people around a table, subject to constraints on the seating arrangement, or the number of ways to determine certain hands in cards (eg, full house) [Familiarity]</li> <li>Solve a variety of basic recurrence relations [Familiarity]</li> <li>Analyze a problem to determine underlying recurrence relations [Familiarity]</li> <li>Perform computations involving modular arithmet</li> </ul>	Content	Generales Goals

### 8. Methodology

- 1. El profesor del curso presentará clases teóricas de los temas señalados en el programa propiciando la intervención de los alumnos.
- 2. El profesor del curso presentará demostraciones para fundamentar clases teóricas.
- 3. El profesor y los alumnos realizarán prácticas
- 4. Los alumnos deberán asistir a clase habiendo leído lo que el profesor va a presentar. De esta manera se facilitará la comprensión y los estudiantes estarán en mejores condiciones de hacer consultas en clase.

#### 9. Assessment

Continuous Assessment 1: 20 %

Partial Exam : 30~%

Continuous Assessment 2 : 20 %

Final exam : 30 %
