

School of Computer Science Sillabus 2023-I

1. COURSE

CS251. Computer graphics (Elective)

2. GENERAL INFORMATION

2.1 Course	:	CS251. Computer graphics
2.2 Semester	:	7^{mo} Semestre.
2.3 Credits	:	4
2.4 Horas	:	2 HT; 4 HP;
2.5 Duration of the period	:	16 weeks
2.6 Type of course	:	Elective
2.7 Learning modality	:	Blended
2.8 Prerrequisites	:	
		• CS312 Advanced Dat

- CS312. Advanced Data Structures . (6^{th} Sem)
- MA307. Mathematics applied to computing. (6^{th} Sem)
- CS312. Advanced Data Structures . (6^{th} Sem)
- MA307. Mathematics applied to computing. (6^{th} Sem)

3. PROFESSORS

Meetings after coordination with the professor

4. INTRODUCTION TO THE COURSE

It offers an introduction to the area of Computer Graphics, which is an important part of Computer Science. The purpose of this course is to investigate the fundamental principles, techniques and tools for this area.

5. GOALS

- Bring students to concepts and techniques used in complex 3-D graphics applications.
- Give the student the necessary tools to determine which graphics software and which platform are best suited to develop a specific application.

6. COMPETENCES

1) Analyze a complex computing problem and to apply principles of computing and other relevant disciplines to identify solutions. (Usage)

6) Apply computer science theory and software development fundamentals to produce computing-based solutions. (Usage)

7. TOPICS

Topics	
	Learning Outcomes
 Media applications including user interfaces, audio and video editing, game engines, cad, visualization, virtual reality Tradeoffs between storing data and re-computing data as embodied by vector and raster representations of images Additive and subtractive color models (CMYK and RGB) and why these provide a range of colors Animation as a sequence of still images 	 reasonably represented by discrete samples, for example, how images can be represented by pixels [Familiarity] Describe color models and their use in graphics diaplay devices [Familiarity]

Competences Expected:	
Copics	Learning Outcomes
 Rendering in nature, e.g., the emission and scattering of light and its relation to numerical integration Forward and backward rendering (i.e., ray-casting and rasterization) Basic radiometry, similar triangles, and projection model Affine and coordinate system transformations Ray tracing Visibility and occlusion, including solutions to this problem such as depth buffering, Painter's algorithm, and ray tracing Simple triangle rasterization Rendering with a shader-based API Application of spatial data structures to rendering Sampling and anti-aliasing Forward and backward rendering (i.e., ray-casting and rasterization) 	 Discuss the light transport problem and its relation to numerical integration ie, light is emitted, scatter around the scene, and is measured by the eye [Fmiliarity] Describe the basic graphics pipeline and how forwar and backward rendering factor in this [Familiarity Create a program to display 3D models of simp graphics images [Usage] Obtain 2-dimensional and 3-dimensional points I applying affine transformations [Usage] Apply 3-dimensional coordinate system and the changes required to extend 2D transformation or erations to handle transformations in 3D [Usage] Contrast forward and backward rendering [Assessment] Explain the concept and applications of texture mapping, sampling, and anti-aliasing [Familiarity] Explain the ray tracing/rasterization duality for the visibility problem [Familiarity] Implement a simple real-time renderer using a rasterization API (eg, OpenGL) using vertex buffers ar shaders [Usage] Compute space requirements based on resolution ar color coding [Assessment] Compute time requirements based on refresh rate rasterization techniques [Assessment]

Competences Expected:		
Topics	Learning Outcomes	
Event management and user interactionApproaches to design, implementation and evaluation of non-mouse interaction	• Discuss the advantages (and disadvantages) of nor mouse interfaces [Assessment]	
– Touch and multi-touch interfaces		
– Shared, embodied, and large interfaces		
 New input modalities (such as sensor and location data) 		
– New Windows, e.g., iPhone, Android		
 Speech recognition and natural language processing 		
– Wearable and tangible interfaces		
– Persuasive interaction and emotion		
 Ubiquitous and context-aware interaction tech- nologies (Ubicomp) 		
 Bayesian inference (e.g. predictive text, guided pointing) 		
– Ambient/peripheral display and interaction		

Competences Expected:		
Topics	Learning Outcomes	
 Fopics Basic geometric operations such as intersection calculation and proximity tests Volumes, voxels, and point-based representations Parametric polynomial curves and surfaces Implicit representation of curves and surfaces Approximation techniques such as polynomial curves, Bezier curves, spline curves and surfaces, and nonuniform rational basis (NURB) spines, and level set method Surface representation techniques including tessellation, mesh representation, mesh fairing, and mesh generation techniques such as Delaunay triangulation, marching cubes Spatial subdivision techniques Procedural models such as fractals, generative modeling, and L-systems Elastically deformable and freeform deformable models Subdivision surfaces Multiresolution modeling Reconstruction Constructive Solid Geometry (CSG) representation 	 Learning Outcomes Represent curves and surfaces using both implic and parametric forms [Usage] Create simple polyhedral models by surface tessell tion [Usage] Generate a mesh representation from an implicit su face [Usage] Generate a mesh from data points acquired with laser scanner [Usage] Construct CSG models from simple primitives, suc as cubes and quadric surfaces [Usage] Contrast modeling approaches with respect to spar and time complexity and quality of image [Asses ment] 	

Unit 5: Advanced Rendering (6) Competences Expected:		
Topics		
 Time (motion blur), lens position (focus), and continuous frequency (color) and their impact on rendering Shadow mapping Occlusion culling Subsurface scattering Non-photorealistic rendering GPU architecture Human visual systems including adaptation to light, sensitivity to noise, and flicker fusion 	 Demonstrate how an algorithm estimates a solution to the rendering equation [Assessment] Prove the properties of a rendering algorithm, eg, complete, consistent, and unbiased [Assessment] Implement a non-trivial shading algorithm (eg, toon shading, cascaded shadow maps) under a rasterization API [Usage] Discuss how a particular artistic technique might be implemented in a renderer [Familiarity] Explain how to recognize the graphics techniques used to create a particular image [Familiarity] 	
Readings : [HB90], [Hug+13], [Wol11], [Shr+13]		

Topics	Learning Outcomes
 Forward and inverse kinematics Collision detection and response Procedural animation using noise, rules (boids/crowds), and particle systems Skinning algorithms Physics based motions including rigid body dynamics, physical particle systems, mass-spring networks for cloth and flesh and hair Key-frame animation Splines Data structures for rotations, such as quaternions Camera animation Motion capture 	 Compute the location and orientation of model part using an forward kinematic approach [Usage] Implement the spline interpolation method for producing in-between positions and orientations [Usage Implement algorithms for physical modeling of particle dynamics using simple Newtonian mechanics, for example Witkin & Kass, snakes and worms, symplectic Euler, Stormer/Verlet, or midpoint Euler methods [Usage] Discuss the basic ideas behind some methods for fluid dynamics for modeling ballistic trajectories, for example for splashes, dust, fire, or smoke [Familian ity] Use common animation software to construct simplorganic forms using metaball and skeleton [Usage]

8. WORKPLAN

8.1 Methodology

Individual and team participation is encouraged to present their ideas, motivating them with additional points in the different stages of the course evaluation.

8.2 Theory Sessions

The theory sessions are held in master classes with activities including active learning and roleplay to allow students to internalize the concepts.

8.3 Practical Sessions

The practical sessions are held in class where a series of exercises and/or practical concepts are developed through problem solving, problem solving, specific exercises and/or in application contexts.

9. EVALUATION SYSTEM

******** EVALUATION MISSING *******
